Today's Audio Visual

With Tony the AV Guy

Tony Sprando, president of Audio Visual Presentations, Inc offers his insight about the audio-video industry for your church, home or business.

Acoustical Nightmare?

Need answers for your acoustical problems?

Every Sanctuary, Conference Room, Auditorium, or Large Facility has its own set of acoustical challenges presented by two main factors: the type and format of musical or voice projection accompaniment in the room and the shape, construction and layout of the room itself.

These challenges range from poor speech intelligibility during standard verbal communication to uncontrolled sound energy during band performances. It is important to consider each of these factors, as well as the desired look of the finished interior treatments, when determining the proper acoustical solutions for a facility.

From intimate 100 seat sanctuaries to 5,000 seat state-of-the-art facilities, we at Audio Visual Presentations have the solutions for your acoustical problems.

At Audio Visual Presentations, we can help you wake up from your acoustical nightmare with the right solution for your type of sound and nature of room. Call us or visit www.avpres.org/Products/AcousticTreatment.
